Study details

Good candidate for emailing author

If it has been published in the last 10 years and has great data, we know the author, etc.

- Yes
- No
- Maybe

Notes

Any notes that you think would be useful to have later, important details about this study that can't be put in the template elsewhere

This study has more than one reservoir

If yes, please fill out the extraction template for multiple waterbodies

- Yes
- No

How many waterbodies are in this study?

# of waterbodies that fit our criteria

What was the aim of this study?

short description (1 sentence) about study. feel free to copy paste from study, just put in quotes!

Methods

Reservoir details

Country where reservoir is located

If there are multiple reservoirs within one study, each reservoir will get it's own line in the multiple extraction google sheet!

Reservoir Name

Physical Reservoir Characteristics

Latitude and Longitude (Decimal Degrees)

Please convert to dd! Just input the lat/long into google maps and take out the dd. It's also a great check to make sure the lake is where you think it is! Sometimes lat/longs are incorrect.

	Latitude	Longitude
DD		

Depth (m)

	Reservoir max depth (m) at full pond	Max depth observed	Mean depth	Min depth
Depth				

Volume (m^3)

	Max volume at full pond (m3)	Max volume observed	Minimum volume observed
Volume			

Surface area (km^2)

- Yes
- No
- Only one year of data
- Unknown

+ Months samples were collected in
  - January
  - February
  - March
  - April
  - May
  - June
  - July
  - August
  - September
  - October
  - November
  - December

+ Frequency of chla/phyto/cyano sampling
  - sub-daily
  - daily
  - weekly
  - fortnightly
  - monthly
  - quarterly
  - seasonally
  - irregular
  - other

+ Which seasons were sampled?
  - winter
  - spring
  - summer
  - fall
  - rainy
  - dry
  - monsoon
  - other

+ Aa Number of sites sampled within the reservoir

+ One depth or multiple depths?
  - One depth
  - Multiple depths
  - Integrated sample
  - Not reported
  - Other

+ H_2 Water Level Change

+ How was water level measured?
  - remote sensing

	Surface area at full pool	Surface area observed
Surface area		

Trophic Status

- hypereutrophic
- eu-hypereutrophic
- eutrophic
- meso-eutrophic
- mesotrophic
- oligo-mesotrophic
- oligotrophic
- not reported
- Other

Trophic Status descriptors

Fill these out IF trophic status is not listed

	Mean Total Phosphorus	Mean Total Chlorophyll	Secchi Depth
values			

Sample Collection

Length of Study (Years)

An integer for the number of distinct years when data was collected

Were the years consecutive?

- Yes
- No
- Only one year of data
- Unknown

Months samples were collected in

- January
- February
- March
- April
- May
- June
- July
- August
- September
- October
- November
- December

Frequency of chla/phyto/cyano sampling

Samples must be collected for at least 3 months and have at least (we had 6, currently 4?) data points

- sub-daily
- daily
- weekly
- fortnightly
- monthly
- quarterly
- seasonally
- irregular
- other

Which seasons were sampled?

- winter
- spring
- summer
- fall

- ground-based measurements
- Other

+ Water level change (m or m^3)

+ Aa Comments on water level change

+ Magnitude of water level change (%)

+ Aa Comments on % water level change

+ What physical variables were measured?
  - water temperature
  - water level
  - secchi/transparency
  - light (PAR, photic zone)
  - turbidity
  - total suspended solids
  - total dissolved solids
  - Other

+ What chemical variables were measured?
  - pH
  - DO (dissolved oxygen)
  - DOC (dissolved organic carbon)
  - DIC (dissolved inorganic carbon)
  - DOM (dissolved organic matter)
  - POM (particulate organic matter)
  - TP (total phosphorus)
  - SRP (soluble reactive phosphorus)
  - ORP (orthophosphate)
  - TN (total nitrogen)
  - TKN (total kjeldahl nitrogen)
  - NO3 (nitrate)
  - NO2 (nitrite)
  - NH4/NH3+ (ammonia/ammonium)
  - DIN (dissolved inorganic nitrogen)
  - metals
  - conductivity
  - salinity
  - Other

+ What biotic variables were measured?
  - filtered chlorophyll (ug/L)
  - sensor chlorophyll (ug/L)
  - sensor chlorophyll (RFUs)
  - Flouroprobe (sensor phyto groups)
  - phytoplankton microscopy
  - single cyanobacterial taxon
  - cyanobacterial toxins
  - Other

+ Characterize the water level decrease.
  - Drawdown for flood prevention

- rainy
- dry
- monsoon
- other

Number of sites sampled within the reservoir

Focused on the phytoplankton response variable

One depth or multiple depths?

Focused on the phytoplankton variable only.

- One depth
- Multiple depths
- Integrated sample
- Not reported
- Other

Water Level Change

How was water level measured?

- remote sensing
- ground-based measurements
- Other

Water level change (m or m^3)

If a water level decrease, report with a negative! Report the change from "normal" if both an increase and a decrease.

	Volume change increase (m^3)	Volume change decrease (m^3)	Elevation change increase (m)	Elevation change decrease (m)
maximum				

Comments on water level change

Please use this for any case that needs more explanation (e.g. results reported don't reflect the maximum water level change)

Magnitude of water level change (%)

% total volume or % depth change. Please convert to % if reported in proportion. A DECREASE is negative, an INCREASE is positive.

	Volume % change (increase)	Volume % change (decrease)	Depth % change (increase)	Depth % change (decrease)
Maximum % WL change				

Comments on % water level change

Please use this for any case that needs more explanation (e.g. results reported don't reflect the maximum water level change)

What physical variables were measured?

- water temperature
- water level
- secchi/transparency
- light (PAR, photic zone)
- turbidity
- total suspended solids
- total dissolved solids
- Other

- Drawdown for dam maintenance
- Drawdown for eco-flow
- Drawdown due to water consumption
- Drawdown due to water diversion
- Drawdown due to drought
- Seasonal variability
- Decrease for another reason

Characterize the water level increase.

- Decrease/stop of water release
- Water diversion
- Managed increase in flow from upstream
- Decrease in water consumption
- Flooding
- Monsoon
- Hurricane
- Seasonal variability
- Return to non-drought conditions
- Increase for another reason

Notes to describe water level change

Results

Measured Variables

Does the study report a change in trophic status under chai

- Yes
- No
- NA

What physical variables did the authors identify as exhibitin

- water temperature
- secchi/transparency
- light (PAR/photic zone)
- turbidity
- total suspended solids
- total dissolved solids
- not assessed
- none of these
- Other

What chemical variables did the authors identify as exhibiti

- pH
- DO
- DOC
- DIC
- DOM
- POM
- TP
- SRP
- ORP
- TN
- TKN

What chemical variables were measured?

- pH
- DO (dissolved oxygen)
- DOC (dissolved organic carbon)
- DIC (dissolved inorganic carbon)
- DOM (dissolved organic matter)
- POM (particulate organic matter)

Characterize the water level decrease.

- Drawdown for flood prevention
- Drawdown for dam maintenance
- Drawdown for eco-flow
- Drawdown due to water consumption
- Drawdown due to water diversion
- Drawdown due to drought
- Seasonal variability
- Decrease for another reason

Characterize the water level increase.

- Decrease/stop of water release
- Water diversion
- Managed increase in flow from upstream
- Decrease in water consumption
- Flooding
- Monsoon
- Hurricane
- Seasonal variability
- Return to non-drought conditions
- Increase for another reason

Notes to describe water level change

If you chose "another reason", please describe.

Results

Measured Variables

Does the study report a change in trophic status under changed water level?

- Yes

- NO3
- NO2
- NH4/NH3+
- DIN
- metals
- conductivity
- salinity
- not assessed
- none of these
- Other

What physical variables did the authors identify as driving p

- water temperature
- water level
- secchi/trasparency
- light (PAR, photic zone)
- turbidity
- total suspended solids
- total dissolved solids
- Other

What chemical variables did the authors identify as driving

- pH
- DO
- DOC
- DIC
- DOM
- POM
- TP
- SRP
- ORP
- TN
- TKN
- NO3
- NO2
- NH4/NH3+
- DIN
- metals
- conductivity
- salinity
- not assessed
- none of these
- Other

H2 Water Level Decreases

What was the phytoplankton response to water level decrea

- Increase in phytoplankton
- Decrease in phytoplankton
- No significant response
- Not measured
- Other

No
NA

What physical variables did the authors identify as exhibiting a response to water level change?

A variable that changed/responded to water level change

- water temperature
- secchi/transparency
- light (PAR/photic zone)
- turbidity
- total suspended solids
- total dissolved solids
- not assessed
- none of these
- Other

What chemical variables did the authors identify as exhibiting a response to water level change?

A variable that changed/responded to water level change

- pH
- DO
- DOC
- DIC
- DOM
- POM
- TP
- SRP
- ORP
- TN
- TKN
- NO3
- NO2
- NH4/NH3+
- DIN
- metals
- conductivity
- salinity
- not assessed
- none of these
- Other

What physical variables did the authors identify as driving phytoplankton/cyanobacteria/chlorophyll response?

The variables that authors identify as most important

- water temperature
- water level
- secchi/trasparency
- light (PAR, photic zone)
- turbidity
- total suspended solids
- total dissolved solids
- Other

What chemical variables did the authors identify as driving phytoplankton/cyanobacteria/chlorophyll response?

The variables that authors identify as most important

- pH
- DO
- DOC

What was the cyanobacterial response to water level decre

- Increase in cyanobacteria
- Decrease in cyanobacteria
- No significant response
- Not measured
- Other

What was the toxicity response to water level decrease?

- More toxins present
- Less toxins present
- No significant response
- Not measured
- Other

What was the phytoplankton community response to water

- shift to cyanos
- shift away from cyanos
- shift in dominant phytoplankton group that is not cyanos
- Not measured
- Other

Water Level Increases

What was the phytoplankton response to water level increa

- Increase in phytoplankton
- Decrease in phytoplankton
- No significant response
- Not measured
- Other

What was the cyanobacteria response to water level increa

- Increase in cyanobacteria
- Decrease in cyanobacteria
- No significant response
- Not measured
- Other

What was the toxicity response to water level increase?

- More toxins present
- Less toxins present
- No significant response
- Not measured
- Other

What was the community response to water level increase?

- shift to cyanos
- shift away from cyanos
- shift in dominant phytoplankton group that is not cyanos
- Not measured
- Other

Quantify the response to water level change, if applicable

This paper is exemplary!

- DIC
- DOM
- POM
- TP
- SRP
- ORP
- TN
- TKN
- NO3
- NO2
- NH4/NH3+
- DIN
- metals
- conductivity
- salinity
- not assessed
- none of these
- Other

Water Level Decreases

What was the phytoplankton response to water level decreases or drought?

- Increase in phytoplankton
- Decrease in phytoplankton
- No significant response
- Not measured
- Other

What was the cyanobacterial response to water level decreases or drought?

- Increase in cyanobacteria
- Decrease in cyanobacteria
- No significant response
- Not measured
- Other

What was the toxicity response to water level decrease?

- More toxins present
- Less toxins present
- No significant response
- Not measured
- Other

What was the phytoplankton community response to water level decrease?

- shift to cyanos
- shift away from cyanos
- shift in dominant phytoplankton group that is not cyanos
- Not measured
- Other

Water Level Increases

What was the phytoplankton response to water level increase?

- Increase in phytoplankton
- Decrease in phytoplankton
- No significant response
- Not measured

- Yes
- NA

- Other

What was the cyanobacteria response to water level increase

- Increase in cyanobacteria
- Decrease in cyanobacteria
- No significant response
- Not measured
- Other

What was the toxicity response to water level increase?

- More toxins present
- Less toxins present
- No significant response
- Not measured
- Other

What was the community response to water level increase?

- shift to cyanos
- shift away from cyanos
- shift in dominant phytoplankton group that is not cyanos
- Not measured
- Other

Quantify the response to water level change, if applicable

Please add units for everything but chlorophyll

	Low water condition	"Normal" water condition	High water condition
Chlorophyll (ug/L)			
Phytoplankton biomass/biovolume			
Cyanobacteria			
Toxicity			

This paper is exemplary!

- Yes
- NA
